

Desk Essentials

Power And Data Trough

Power and data trough attaches to the interior side of the front modesty panel. The trough will accommodate mounting of a Power Track or a Power Bar. Data trough is 2.5" wide x 2" deep and has a cut-out to mount a data port plate. Various trough lengths are available.

Side Filler Panel

Side filler panel can mount on one or both ends of the desk. The panel is both functional and decorative.

At the end-of-a-row of desks, the side filler panel prevents access to the interior of the desk, which could include electrical components. Panel has a 3" diameter grommet for power and data cables.

Power / Data Flip-up

Power / Data Flip-Up has three 15 Amp power receptacles with an 8' power cord and two Cat 5 Ethernet connections. A push-button latch allows the user to easily rotate the device from a covered closed position to an open position. The Flip-Up is normally positioned between the two lids on a dual user desk.
