

IN-SURFACE DIGITAL READ-OUT MEMORY SWITCH

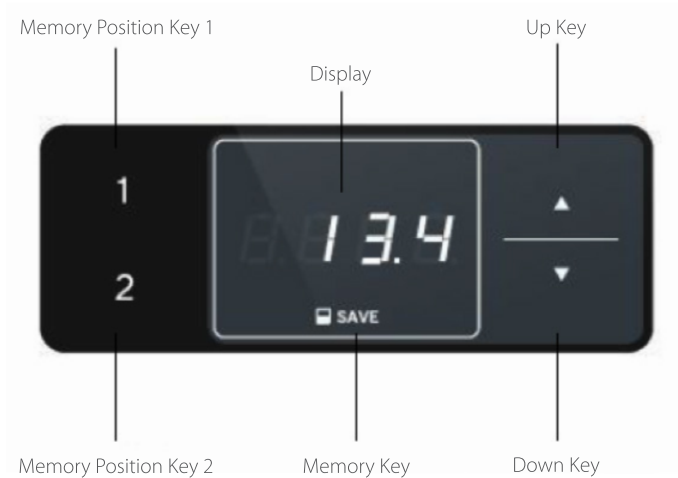

RISE-SWITCH-SUMMS

The sleek and simple in-surface digital display memory switch fits directly into the worksurface, making it ideal for height adjustable conference tables.

IN-SURFACE DIGITAL READ-OUT MEMORY SWITCH

RISE-SWITCH-SUMS

OVERVIEW

- Touch technology up-down switch with LED read-out display
- Two user-programmable height settings
- Programmable height control allows the users to set a maximum and/or minimum height for the worksurface
- No screws required

OPERATIONS

Saving of a memory position

1. Move table to desired height using up or down keys.
2. Press the Memory Key (display shows S-).
3. Press one of the Memory Keys (1 or 2). The display will show S and the number of the pressed key (for example: S2).
4. After that procedure a double “click” is heard and after 2 seconds the actual height is read on the display. The height is now saved.

Moving to a saved position

1. Press and hold one of the Memory Position Keys (1 or 2)
2. The desk will move to a saved position only as long as the key remains pressed.

INSTALLATION

Cut a through hole into the worksurface using the dimensions shown and insert the switch.
